
Pfam, clean genomes: dS <= 0.1 (identical + H1) vs all other paralog genes
-log10 q (BH), capped at 60
log2 odds ratio (MH, genome x length strata)
Pfam, clean genomes: dS 0.1-0.3 vs all other paralog genes
-log10 q (BH), capped at 60
log2 odds ratio (MH, genome x length strata)
Protein length by dS bin (clean genomes, >=10 genes per bin)
per-genome median protein length (aa)
median share of proteins < 150 aa
dS=0
0-0.1
0.1-0.3
0.3-1.5
>1.5
dS bin of the gene (minimum over sampled pairs)
